Berlin's imports according to countries 2008/09 30
Berlin's exports according to countries 2008/09 30

Explanations 32

Foreword

Berlin's economy proves to be robust

For Berlin's economy, 2009 was a difficult year due to the economic and financial crisis. Nevertheless, the companies were able to assert themselves well in a pan-German comparison. This is above all to be put down to the health area, which is less susceptible to the crisis, the strong service sector and the robust craft trades. But also the highly innovative, flexible industrial companies in Berlin, led by the pharmaceutical branch, were able to adapt to the challenges of the crisis better than companies in other regions. Berlin profits from the strength of its future-orientated clusters. Economy is growing above all in the areas of the health and creative trades and also in the fields of the so-called green economy. The city's economy was once again able to show its strength in the transport area as well.

The Berlin labour market was only slightly affected by the crisis. By November of the year 2009, the unemployment rate had dropped slightly and was only just above the previous year's figure by the end of the year. Nevertheless, Berlin is still bottom of the table in the comparison with the whole of Germany. One positive thing, on the other hand, is the fact that the number of jobs subject to social insurance payments increased once more, unlike the nationwide trend.

Dr. Eric Schweitzer, President of the CCI Berlin, and Stephan Schwarz, President of the Berlin Chamber of Trades

As an innovative economic location, Berlin is also internationally gaining in importance. This brochure does justice to this development. Companies, politics and all other interested parties are thus given a current, statistical overview of the economy in Berlin and the area around the city in the English language.

Dr. Eric Schweitzer

Stephan Schwarz
